

About Gilead:

Gilead Sciences, Inc. is a research-based biopharmaceutical company that discovers, develops and delivers innovative therapeutics for people with life threatening diseases. Since its founding in 1987, Gilead has become a leading biopharmaceutical company with a broad product portfolio, a growing pipeline of investigational drugs and a dedicated team of 12,000 mission-driven employees who embrace a shared sense of purpose and a culture of excellence. For more than 30 years, Gilead's research program has achieved advancements that were once thought impossible. A revolutionary approach to cancer therapy. Single tablet regimens for HIV. A cure for hepatitis C. The impossible is simply what hasn't been achieved yet. As we bring new products into clinical development, our goal remains the same – to discover, develop and commercialize therapeutics that transform care for people around the world, including regions where access to medicine is limited or does not yet exist. Gilead's research and development programs currently focus on HIV/AIDS, liver diseases, hematology and oncology, inflammatory and respiratory diseases and cardiovascular conditions. Gilead's facility in Edmonton, Alberta, is responsible for the development and manufacturing of investigational drugs, as well as supply of active pharmaceutical ingredients for clinical research programs and to support new product launches.
